Precise care agent dosage

Control block for cleansing and care unit

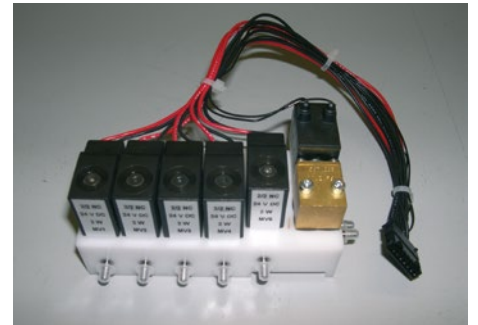

The KaVo QUATTROcare is a program-controlled care system for the cleaning and lubrication of up to four straight and contra-angle handpieces and turbine instruments simultaneously in one care sequence.

Simple operation by just pressing the start button combined with the automatic control and care agent dosage guarantees highest care efficiency. Instrument quality can thus be conserved while operator errors during care are eliminated.

The Kendrion 6-fold valve block supplies the control valves needed for the inflow and discharge of water and disinfectant during cleaning.

Product features

- Valve block with 6 valves
- Special circuit
- Special product: 3/2 NO/NC, NW 1.2 mm, 4 bar
